Perspectives from CU Boulder CS Majors?

Hello, prospective Buff here!

I was curious if any CS majors had experiences to share. I'm curious about the program, job prospects (specific to CU, ik they suck in general), and anything else.

Are the career fairs good? Are there internships nearby? Etc.

As an in state student, relative to every other school in Colorado, CU is ranked quite high for CS (#39). However I've heard mixed opinions on if CU is actually better than CSU/Mines or worth it tuition wise. It's the second most expensive school I'm looking at next to Purdue, but it also seems really impressive for an in state school.

Any thoughts, perspectives, experiences, regrets?

Thanks so much!

It is not worth it for out of state tuition, but that doesn't matter to a lot of people who are able to attend CU.

I wouldn't say there is anything special about the CS program. Certainly nothing you couldn't/wouldn't learn at basically any CS program. But if you are interested in the Aerospace industry, there will be some good internship and job opportunities with the close tie between that industry and CU. Job opportunities are still great for CS btw. They are #4 in employed in a job that requires a degree, behind computer engineering, medical doctor, and another engineering. No other career gives you such a good chance to get a remote job making 6 figures either right after graduating or within just a couple years. AI is obviously going to shake everything up, but the troubles CS have will be felt by all degrees eventually. If you enjoy coding I would still recommend it as a degree.

The town itself is awesome, and being right there next to the mountains also awesome. Convenient bus ride to the airport is available. Denver is ok for a bigger city, though its too spread out imo compared to other metro areas.

I've heard CU is great for Aerospace so that makes sense. Thanks for the insight!

I did my bachelors at CSU and am now doing my masters at CU. In my opinion, the computer science program is much better here. There's more focus on subjects like CS theory over much less important

Hm I definitely see your point. Though I wonder how it would shake out as someone interested in software engineering... You offer a very unique perspective having gone to both places, thank you!

**purrmutations** • 4mo ago

Theory is not as important for the majority of good jobs in CS though.

I graduated from CU In Aerospace and Applied Math. I wish I studied CS because as an Intl student I had trouble getting jobs in Aero, and this was 15 years ago and I was not well versed with the job market.

I think if you chose CS, there are better schools out there for it, but definitely the opportunity you get in Aero is second to none. I would also look at schools in Denver, or out of state like Purdue or OSU where tuition is comparable even as out of state student. Wish you the best.

I had a great experience at CU. I am out-of-state and had roughly 50% covered by family, with the other half on me to pay off after school. So that's a major consideration. For Colorado, I think it's the best CS program and I know a couple of people who transferred from other schools who would agree.

I would say CU is a mixed bag with classes. I had some classes where the teachers would be super invested, create their own curriculum, etc. The math classes tended to be the higher quality professors. Then, I would have other teachers who had material completely taken from a Carnegie Mellon course. My intro to robotics class was through Coursera for Christ sake and it didn't seem to be worth the \$12,000 a semester I was paying. With that said, there's flexibility in which courses you can take and drop. I preach this but I would go to the intro classes for everything (even ones I wasn't enrolled in) if possible to get a feel. I dropped Robotics and HCI immediately and enrolled in better classes.

As for Boulder, it is becoming less of a tech hub than it used to be. Sun Microsystems was in Boulder before it got bought by Oracle. It owned the rights to the Java platform and tech. Also had advanced processors for the time. So there's some lingering effects of that but I'd say Denver will probably end up being better for tech jobs in the long run. But, I still count CU as a beneficiary of that so the job market isn't so bad. It's not Silicon Valley, but it's still pretty good. I graduated in December 2024 and had my first day at a Boulder tech company in February.

And as someone from the Midwest, I don't know why anyone would move away from Colorado and go to West Lafayette. And yes, I toured there too... great engineering but it sucks.

To clarify, that was after scholarships too. The full OOS tuition maybe would've changed my opinion on that lol
